

K11902 - SCALE TRUCK HANDLING CHASSIS

PRODUCT SEEN ON
WWW.LEANPAREDMOLIFT.FR

TRUCK HANDLING CHASSIS WITH INTEGRATED SCALE

Developed and manufactured for all markets with a need to see the kgs loaded on the table.

The built in scale is adapted to fit all EdmoLift lift tables with capacities between 500-6000kg.

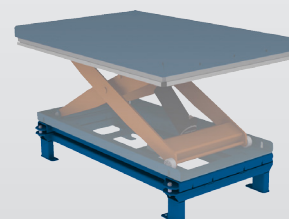

When the chassis is fitted under the lift table it increases the total height of the lift table by 200 mm.

The scale has a pitch of 0,2 kg and the goods to be weighed can be loaded from either the long or short side with a pallet truck or similar.

The truck handling chassis with scale comes complete with four load cells and weight indicator with mains and battery operation.

The load cells are IP67 protected.

Feel free to contact us for further information about potential modification that would suit the specifications of your project.
